Title: Red/Cyan Filters for viewing 3D photos printed on home computer/ printers.

July, 2003

Inventor: Samer Ramadan  
Assigned to: Mission3D LLC.

Abstract: Color Filter wavelength to create the best possible and sharpest Red/Cyan Anaglyph filters for viewing Anaglyph 3D photographs printed on inkjet printers. These filters are for creating high quality 3D glasses and viewers.

After searching the whole market for existing Red/Cyan filters and looking at prior art, I could not find a clean and ghost free red/cyan filters on the market that could view red/cyan anaglyph photos printed on home computer printers. This meant that further research is required to find the appropriate wavelength that works with these printers. The result was the enclosed wavelength that could revolutionize 3D acceptance by providing the clearest and sharpest Anaglyph 3D viewing ever created.

Over numerous trials of different wavelengths and 10 months of trying, the enclosed is the unique wavelength that accomplished the required results (within a variance of  $\pm 5\%$ ).
